

Six roles, and exactly what each one may touch

Every login belongs to one role. This is what that role can and cannot reach — checked against the running system rather than written from the plan, so it describes what the software actually does today.

Who can create whom

Three roles administer other people, and each may only create the ones below it. Nobody can create their own level — a member creating a member would be appointing their own approver.

-
- | | |
|---|--|
| 1 | Administrator — Bala
Creates members, contributors, viewers, teachers and students . The only role that can appoint a member. Administrator accounts are set up during installation, never through the app. |
| 2 | Member
Creates contributors, viewers, teachers and students . Cannot create, edit, block — or even see — another member. |
| 3 | Contributor
Creates students and teachers . Cannot edit or block any account afterwards, and never sees members' details. |
-

Viewers, teachers and students sit outside this ladder — none of them administers anybody.

Role by role

Ordered by how much each one can reach.

Administrator

BALA

Runs everything. No approval queue, no restrictions.

CAN

- + Everything every other role can do
- + Publish to the public website **immediately**
- + Appoint **members** — the only role that can
- + See and block every account
- + Approve or send back anything in the queue

CANNOT

- Act as a student — there is no student view for staff
- Be created through the app; administrators are set up at installation

Member

APPROVES

Everything a contributor does, plus the money, the leads, and the final say on what reaches the public website.

CAN

- + **Approve or send back** a contributor's website changes, with a written reason
- + Edit the website directly — a member's own saves go live at once
- + **Fees** — totals, payments, balances, collection summaries
- + **Enquiries** from the public site
- + Placements — companies, applications, interview rounds
- + Create, edit and delete batches; assign teachers
- + Class schedule, curriculum, recordings, notes, attendance
- + Student roadmaps and the admin dashboard figures
- + The follow-up list of missing recordings and notes
- + The doubts inbox, and marking a doubt answered
- + Create and block contributors, viewers, teachers and students

CANNOT

- See, create, edit or block **another member**
- See, create, edit or block **the administrator**
- Approve a change they submitted themselves

Contributor

NOTHING PUBLISHES

Writes the public website and runs the day-to-day, but publishes nothing: every website save waits for a member.

CAN

- + Edit **every word** of the public website — settings, programmes, syllabi, fees, statistics, mentors, stories, hiring partners
- + Send those changes for approval, and take one back before it is reviewed
- + Read the member's feedback on anything sent back
- + **Onboard students and teachers** — that takes effect immediately
- + Class schedule, curriculum, recordings, notes, attendance
- + Edit a batch and assign teachers to it
- + Placements — companies, applications, interview rounds
- + The doubts inbox, and marking a doubt answered

CANNOT

- **Publish anything** to the website — the direct route is refused, not just hidden
- **Fees** — no figure, no total, nothing
- **Enquiries** from the public site
- Student roadmaps or the admin dashboard figures
- Create or delete a batch
- Edit or block any account, including ones they created
- Create a viewer, another contributor, or a member
- See members' or the administrator's details
- The follow-up list

Viewer

READ ONLY

Watches every batch and chases whoever has not uploaded. Changes nothing about a class, a student or the website.

CAN

- + See **every batch**: who teaches it, who is enrolled, how many attended
- + See which classes have been taught, and whether the recording and notes were uploaded
- + See the follow-up list of everything outstanding, oldest first, with the teacher's phone number
- + **Log a phone call** against a class — its only write anywhere
- + See the closed trail: chased on these dates, delivered on that one

CANNOT

- Change anything about a class — not a date, a topic, a recording or attendance
- Mark a follow-up done by hand; it clears when the file actually appears
- Fees, placements, enquiries or the doubts inbox
- The website, in any form
- See or create any account
- See students' email addresses or phone numbers

Teacher

OWN BATCHES

Teaches. Everything they see is limited to the batches they are assigned to.

CAN

- + Mark a class taught, set its date, paste the recording link, upload the notes
- + Take attendance
- + See their own students' progress and attendance
- + Answer doubts raised by their own students

CANNOT

- See **any batch they are not assigned to** — it reads as though it does not exist
- Fees, placements, enquiries or accounts
- The website, in any form
- The follow-up list — chasing is somebody else's job

Student

OWN DATA

Sees their own learning and nothing about anybody else.

CAN

- + Their dashboard, curriculum and class schedule
- + Watch recordings and download notes for their batch
- + See their own attendance and progress report
- + Raise a doubt and follow their own questions
- + See their own job applications, read only
- + Edit their own name, phone and experience
- + Download their certificate once the course is complete

CANNOT

- See **any other student's** data
- See fees — there is no fee screen for students at all
- Change their own email, batch or course records
- Mark their own attendance or complete a class
- Register themselves; every login is created by staff

The whole picture

Every answer below was read from the running system, not from the specification.

	Admin	Member	Contrib.	Viewer	Teacher	Student
See every batch	Yes	Yes	Yes	Yes	No	No
Create or delete a batch	Yes	Yes	No	No	No	No
Edit a batch, assign teachers	Yes	Yes	Yes	No	No	No
Run the class schedule and curriculum	Yes	Yes	Yes	No	Own	No
Take attendance	Yes	Yes	Yes	No	Own	No
Upload recordings and notes	Yes	Yes	Yes	No	Own	No
Edit the public website	Yes	Yes	Yes	No	No	No
Publish to it without approval	Yes	Yes	No	No	No	No
Approve someone else's changes	Yes	Yes	No	No	No	No
Fees	Yes	Yes	No	No	No	No
Enquiries	Yes	Yes	No	No	No	No
Placements	Yes	Yes	Yes	No	No	No
Student roadmaps	Yes	Yes	No	No	No	No
Admin dashboard figures	Yes	Yes	No	No	No	No
Doubts inbox	Yes	Yes	Yes	No	Own	No
Follow-ups on missing uploads	Yes	Yes	No	Yes	No	No
Create accounts	Yes	Yes	Yes	No	No	No
Block an account	Yes	Yes	No	No	No	No

Own = their own assigned batches only. Every other Yes means all batches.

Rules a table cannot show

A contributor's save changes nothing until it is approved

The live website carries on showing what it showed before. Their own screens keep showing the live version too, with a standing note explaining why — so they are never looking at a site no visitor has.

Any member can approve any contributor's change

Nothing is assigned to a particular person. All members see the whole queue, and the first to act decides it; the others see it move to “approved by ...”. A member cannot approve something they submitted themselves.

Sending a change back requires a reason

Rejection without an explanation is refused by the system. The contributor reads the note on their own screen, revises, and resubmits.

Approval covers the public website only

Onboarding a student, setting a class date and recording a placement all take effect immediately. An account can be blocked afterwards if it was a mistake; a wrong claim published on the website cannot be un-read.

You only see the accounts you administer

A member's account list contains no other members; a contributor's contains only students and teachers. This is enforced when the list is fetched, not merely hidden on screen.

A viewer's phone log does not tick anything off

Logging a call records that somebody chased. The item stays on the list until the recording or notes actually appear, and then clears itself. Nobody can mark it done by hand — the list is a mirror of the class records, and its value is that it cannot be wrong.

BEFORE ANYONE CAN USE THE NEW ROLES

Members, contributors and viewers exist in the software but no such accounts have been created on the live site yet. They are added at **Accounts** in the admin area.

Only the administrator can create the first member, so that account has to come from Bala. Email is not yet configured, which means a new person's password will not reach them automatically — set one in the form and pass it on directly.
